- 4-Colour digital display with analogue bargraphs
- Roll or Z-fold chart
- Front panel or PC, local or remote configuration
- Universal isolated inputs
- Chart illumination
- Maths, timers, counters and totalisers
- PC Card reader
- MODBUS®/Profibus communications
- 236 mm total depth behind panel
- Up to 16 relay outputs
- Up to 4 analogue outputs
- 16 contact inputs

The 4103M is a high specification multipoint chart recorder capable of plotting up to six signals. Enclosed in a sheet steel case designed to meet the requirements of an industrial environment, the recorder is ideal for production or test environments.

### Display

The display module for the 4103M is a high resolution four-colour vacuum fluorescent display (VFD) comprising five 12-mm high characters for process value, twenty 4.7mm characters for text and four 1.5 mm. bargraphs. The display shows the measured value of each channel in turn, together with its associated descriptor or scale. It also gives bargraph indication of the channels' values.

### Configuration

The recorder is fully configurable from the front panel, using push-button keys to follow a series of text prompts. This allows access both to simple operator facilities and, via a password, to the more complex input and instrument configuration. The recorder can also be configured from a DOS based package, allowing the user to set up the configuration off-site for later downloading to the recorder.

### Input technology

Use of the very latest in Application Specific Integrated Circuit (ASIC) and Surface Mount technologies, gives the 4103 input circuitry high accuracy and stability. Inputs are fully universal accepting inputs from thermocouples, resistance thermometers, potentiometers and digital signals.

### Chart Illumination

This option provides a fluorescent tube above the chart, making the traces significantly more visible, even in well lighted areas.

### Maths, Timers, Counters and Totalisers

These options provide the recorder with integrating and counting facilities, and the ability to carry out calculations ranging from simple arithmetic functions to complex application specific functions such as Relative Humidity calculations.

### Memory Card Reader

Using the computer industry standard SRAM PC card type 1, the recorder's configuration can be stored for transfer to another recorder or to a PC for manipulation using the PC configuration tool. Data can also be stored on the memory card in a format readable by standard spreadsheet packages.

### File transfer

Archive files can be transferred (using z-modem) from the recorder's memory card to a PC, either using a modem or by direct connection. In addition, configuration files can be sent to the recorder, thus allowing remote re-configuration. Data from several recorders (on an RS485 serial link), can be imported directly into the PC, and viewed using Eurotherm Review Software.

### MODBUS® Communications

This communications option uses the MODBUS® RTU protocol to ensure compatibility with any standard SCADA software and other types of industrial equipment such as PLCs. RS232 or RS485 specification can be used in single drop (RS232) or multidrop (RS485) applications using a single communications link.

### Profibus Communications

All parameters available over the Modbus protocol are available, as an alternative, over a Profibus DP interface running at up to 12Mbits/sec. allowing direct communication with PLCs etc. Profibus configuration is carried out using the Eurotherm GSD File Editor.

### Relay Outputs

Up to 16 relay outputs can be fitted, driven by any internal recorder event such as channel alarm, totaliser overflow etc. Relays are available as changeover, normally closed or normally open.

### Retransmission outputs

Up to four of the input or maths channels can be output as a linearised current or voltage signal.

### Contact inputs

Recorder inputs can be used as digital inputs to trigger events. The Event input option adds the ability to read a further 16 (encoded) inputs.

## TECHNICAL SPECIFICATION (Input board)

### General

Input types	dc Volts, dc millivolts, dc milliamps (with shunt), Thermocouple, 2 / 3-wire RTD <b>(Channel 1 can be RTD only if no other channels are thermocouple)</b> Contact closure (not chan. 1) >250 ms
Input type mix	Freely configurable.
Maximum number of inputs	6
Input ranges	- 8 to + 38mV; - 30 to + 150 mV; - 0.2 to +1 Volt; - 2 to + 10 V
Termination	Edge connector / terminal block
Noise rejection (48 to 62 Hz)	Common mode: >140dB (channel to channel and channel to ground). Series mode: >60dB.
Maximum common mode voltage	250 Volts continuous
Maximum series mode voltage	45 mV at lowest range; 12 Volts peak at highest range.
Isolation (dc to 65 Hz; BS EN61010)	Installation cat. II; Pollution degree 2
Channel to channel:	300V RMS or dc (double insulation)
Channel to common electronics:	300V RMS or dc (double insulation)
Channel to ground:	300V RMS or dc (basic insulation)
Dielectric strength (BS EN61010)	(1 minute type tests)
Channel to channel:	2300 Vac
Channel to ground:	1350 Vac
Insulation resistance	>10 MΩ at 500 V dc
Input impedance	38mV, 150 mV, 1 V ranges: >10 MΩ; 10 V range: 68.8 kΩ
Over voltage protection	50 Volts peak (150V with attenuator)
Open circuit detection	± 57 nA max.
Recognition time	500 msec
Minimum break resistance	10 MΩ

### DC Input ranges

Shunt/Attenuator	Externally mounted resistor modules
Additional error due to shunt	0.1% of input
Additional error due to attenuator	0.2% of input

### INSTALLATION CATEGORY II

The rated impulse voltage for equipment on nominal 230V mains is 2500V.

### POLLUTION DEGREE 2

Normally, only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation shall be expected.
